**... linking the science and practice of Environmental Health**

**Target Our Specialist Audience**

**Sponsorship Opportunities**

***Environmental Health Journal*** is a quarterly online, international, peer-reviewed journal designed to publish articles on a range of issues influencing environmental health. The Journal aims to provide a link between the science and practice of environmental health, with a particular emphasis on Australia and the Asia-Pacific Region.

***Environmental Health Journal*** publishes articles on research and theory, policy reports and analyses, case studies of professional practice initiatives, changes in legislation and regulations and their implications, global influences on environmental health, and book reviews. Special Issues of Conference Proceedings or on themes of particular interest, and review articles are also published.

***Environmental Health Journal*** recognises the diversity of issues addressed in the environmental health field, and seeks to provide a forum for scientists and practitioners from a range of disciplines. The Journal covers the interaction between the natural, built, and social environment and human health. Areas covered include the identification, assessment and control of occupational hazards, communicable disease control and prevention, ecosystem health and sustainability, and risk assessment and management of environmental health hazards, particularly those pertaining to the need for food safety.

#### ***Circulation & Readership Profile***

*Environmental Health Journal* is distributed to more than 1,500 individuals and organisations in Australia and overseas, including: environmental health officers, local government authorities, health and human services departments, environmental protection and water resources authorities, institutes of food and nutrition, libraries, universities, regional health services, food safety managers, communicable diseases institutes, public and private providers in the areas of noise pollution assessment, or on food, land and water contamination and conservation, and many more.

***Environmental Health Journal*** is of particular interest to environmental health and public health professionals, educators, public health and medical researchers, policy advisers, lawyers, students, building design and inspection officers, health and safety officers, and practitioners in natural resources and the environment, in fact anyone whose area of interest incorporates environmental and human health, and its management.

The supreme advantage of sponsoring *Environmental Health Journal* is our targeted audience of specialists in environmental health.

#### ***Topics of Special Interest to Readers\****

Food safety; waste management; indigenous health; recycling; emergency management; sustainability; climate change; mosquito-borne disease; communicable disease; water contamination; management of waterways; algal bloom; legal and regulatory change; building safety; environmental management.
